

CONTENT MANAGEMENT IN HEALTH CARE

From Written Policy to Executable Rules

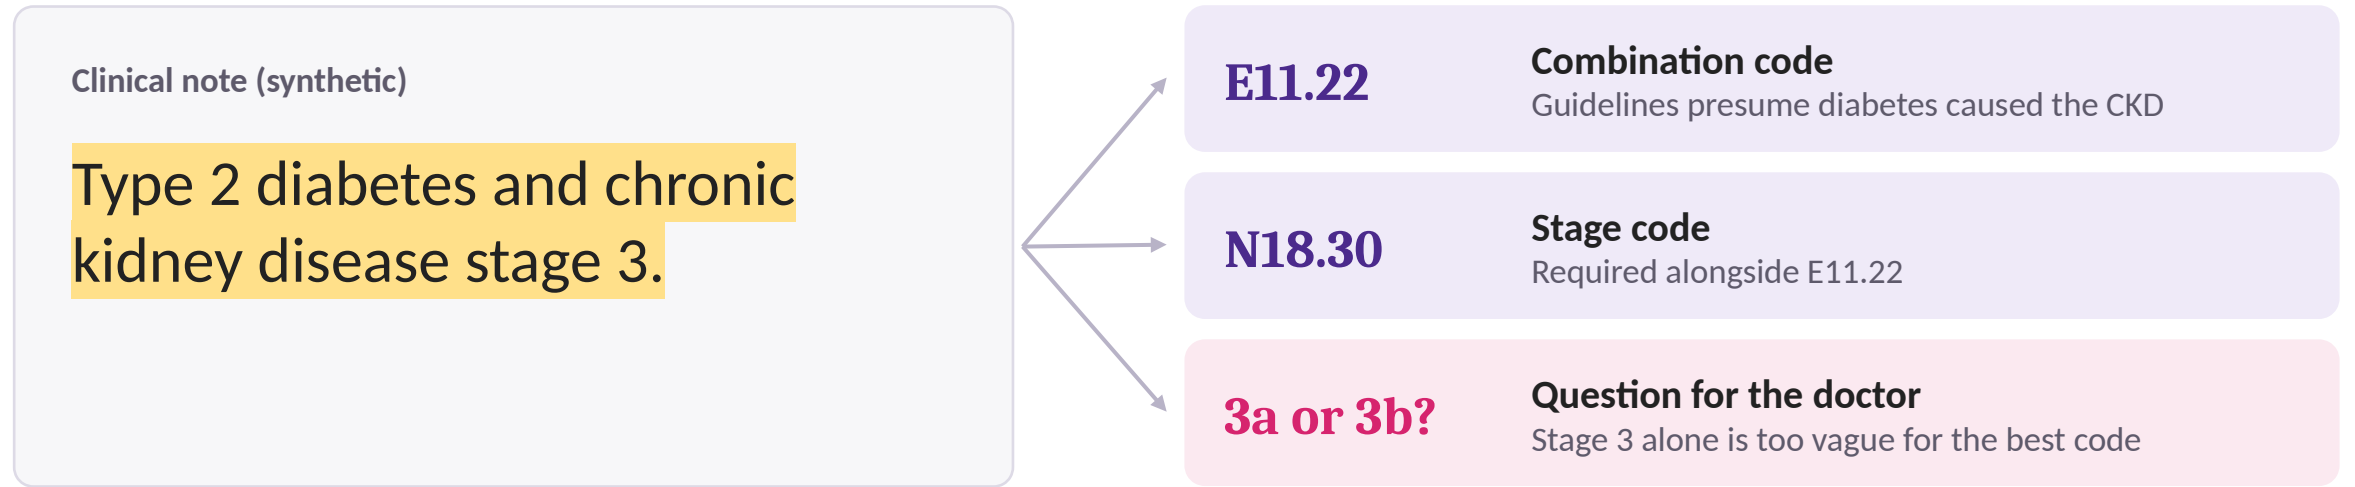

Coding policy is written for people. Claims need exact decisions.

CodeCare AI: an explainable ICD-10-CM coding copilot

PROBLEM STATEMENT

One sentence in a note, three coding decisions

\$28.83B

Medicare improper payments, FY 2025

ACDIS, 2026

41%

of providers see denial rates of 10% or more

Experian Health, 2025

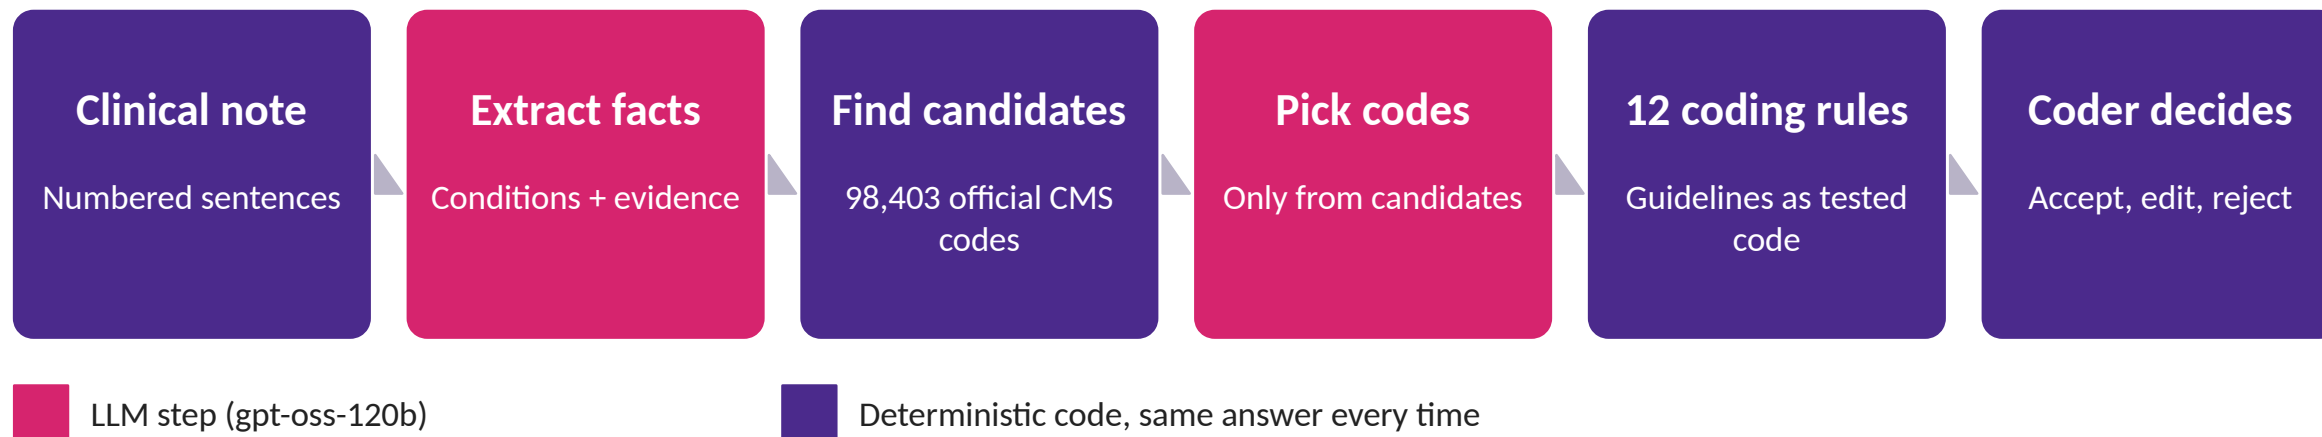

33.9%

best LLM accuracy on ICD-10-CM codes alone

Soroush et al., 2024

SOLUTION

CodeCare AI: the LLM reads, plain code checks

Only real CMS codes

The LLM picks from retrieved codes. Rule R1 rejects anything not billable on the visit date.

Evidence for every code

Each code points to the exact sentence that supports it.

A human coder decides

The coder accepts, edits, or rejects. Every decision is saved.

LIVE DEMO

From note to codes in seconds

Evidence: click a code, see its sentence

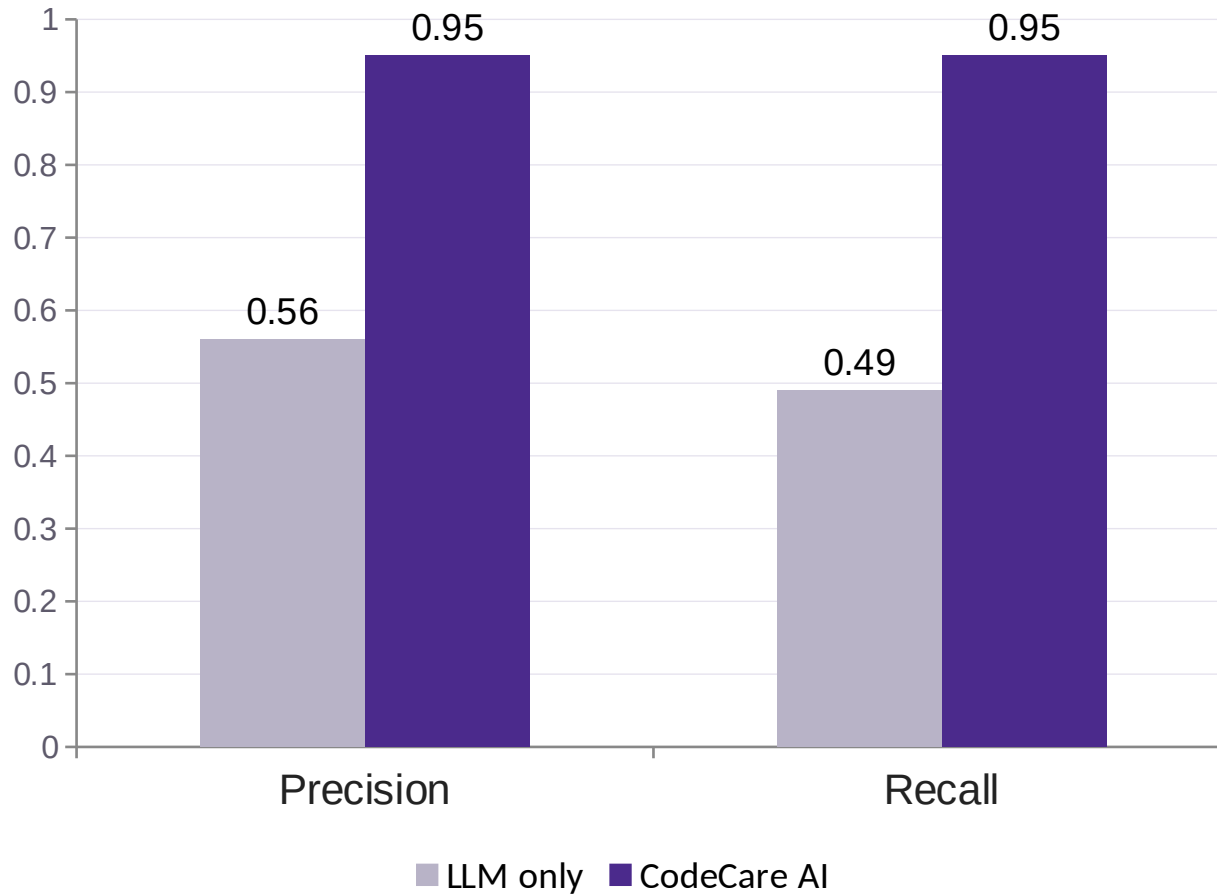

Rules: the combination code and its stage

Gap: a neutral question for the doctor

RESULTS

Same model, with and without the pipeline

12% → 0%

invalid codes (non-existent or non-billable)

0% → 100%

expected documentation gaps flagged

20 notes

synthetic gold set, gpt-oss-120b in both

Synthetic notes. Expected codes checked against the FY 2027 guidelines, not by a certified coder.

Four actions for Cotiviti, and what comes next

Pair every AI-drafted rule with tests

Each drafted rule in Payment Policy Management passes test claims before an analyst approves it.

Put the evidence in every finding

Show the chart sentence and policy section behind each Coding and Clinical Chart Validation finding.

Automate the October 1 update

Find the rules each CMS release affects and rerun their tests before the new codes go live.

Measure AI before trusting it

Track invalid codes and evidence, and compare against an AI-only baseline.

Future scope

Coder-reviewed test set

A larger gold set checked by certified coders

More rule families

Beyond diabetes, kidney, and heart conditions

Procedure code checks

CPT and NCCI rules, already designed

Use AI to read. Use code to decide. Keep the expert in charge.
